

XYLAZINE

(TRANQ, TRANQ DOPE, ZOMBIE DRUG)

Xylazine is a potent drug that can cause serious health problems and overdose deaths when used recreationally. Xylazine is often mixed with other drugs, creating unpredictable and dangerous drug combinations that can harm users. The use of xylazine as a recreational drug has led to an increase in crime and put a strain on law enforcement and healthcare resources. The xylazine crisis has had a particularly negative impact on certain communities in the United States where it is prevalent.
